                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is a complete sequence.

Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genscan (http://CGR-081.mit.edu/GENSCAN.html), GeneMarkHMM (http://genemark.biology.gatech.edu/GeneMark/), tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/), searches of the complete sequence against NCBI none redundant protein database (nr) (ftp://ncbi.nlm.nih.gov/blast/db) and the EST database at NCGR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission

similar to many eukaryotic peptidases e.g. SW:P31430 (MDP1_RAT) rat renal dipeptidase (410 aa) fasta scores; opt: 440, Z-score: 474.0, 36.056$ identity (38.906$ ungapped) in 355 aa overlap. Also weakly similar to TR:Q9KH70 (EMBL.AF268476) thermostable dipeptidase from Brevibacillus borstelensis (307 aa) fasta scores; opt: 273, Z-score: 289.4, 28.159$ identity (30.116$ ungapped) in 277 aa overlap. Contains Péam match to entry PF01244 Renal dipeptiase, Renal dipeptidase. Also similar to heighbouring upstream CDS SCBAC19G2.13c"

Claim 5; Page 32-33; 34pp; English

The present invention relates to novel polymucleotides encoding integrase (int) and excisionase (xis) and an integrase attachment site (atta) which are isolated from pMLP1, a bacteriophage (lysogenic phage) isolated from Micromonospora carbonaca var. africana. Polymucleotides of the invention are useful for transforming an actinomycete with a vector. They are also chromosomes. The integrating vectors are used to express actinomycete penes, manipulate secondary metabolic pathways and create new metabolic products such as hybrid antibiotics. The present sequence is pMLP1 excisionase DNA from Micromonospora carbonacea

The sequence encodes 2 integrases which permit site specific integration of a vector into an actinomycete, especially a Micromonospera, genome. The invention relates to nucleat acids and vectors comprising a M. carbonacea everninomicin biosynthetic pathway resistance gene product carbonacea everninomicin bathway gene the vector is useful for introducing a m. continue for the vector is useful for introducing a certain of the vector is useful for introducing a certain for the genus Micromonospora. The DNA encoding the biosynthetic proteins is consetul for synthesising novel everninomicin-related compounds, arising from modifications of the DNA sequence designed to change glycosyl and modified orsellinic acid groups contained in everninomicin, for modified orsellinic acid groups contained in everninomicin, for complete or much control or mutant everninomicin blosynthetic enzyme for evaluation, diagnosis and preferably biosynthesis of everninomicin or cother secondary metabolic products, improving the yield of everninomicins and preferably biosynthesis of everninomicins and contains and also as a hybridisation probe to combinatorial biosynthesis. The encoded polypeptides are useful for combinatorial biosynthesis to generate libraries of orthomycins, e.g. the integrase allows flow increased by products and drug discovery. The bnA encoded products cortain analogues/homologues and drug discovery. The bnA encoding the integrase the yield of known products or to generate genes of choice into chromosomes of different hosts and to integrate genes. The vector can also be used to increasing a given gene dosage. The integrate contains and to integrate and to prementation processes involving to early out bioconversions with compounds to which the strain is containly sensitive and is thus useful in fermentation processes involving engine e.g. Streptomyces antibioticus. (Updated on 11-SBP-2003 to standardise of e.g. Streptomyces antibioticus. (Updated on 11-SBP-2003 to standardise on the products and seed to integrate endormall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1082

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acid molecule comprising mitomycin biosynthetic gene cluster useful for cloning mitomycin biosynthetic genes for elucidating the molecular basis of mitosane ring system biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to isolated and purified nucleic acid molecules from the mitomycin biosynthetic gene cluster. Mitomycins are a group of natural products that contain a variety of functional groups, including amino benzoquinone and axiridine ring systems. The S. lavendulae

mitomycin biosynthetic gene cluster comprises 47 mitomycin genes spanning 55kb of DNA. The invention includes an expression cassette comprising a mitomycin biosynthetic gene operably linked to a promoter, and host cells transformed with the cassette. The nucleotide, and protein sequences and the transformed with the cassette. The nucleotide and protein sequences and cativities. The nucleotide sequenced in antiasthmatic, antiinflammatory, cytostatic, immunomodulatory, and antibiotic cativities. The nucleotide sequence are used to elucidate the molecular basis for the biosynthesis of the mitosane ring system, as well as to engineer the biosynthesis of novel natural products, e.g. antibiotics, anti-inflammatory agents, anti-cancer agents, immune-enhancers, immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other disease involving respiratory inflammation, or cholesterol-lowering agents or as crop protection agents (e.g. fungicides or insecticides) as well as bipolymers, e.g., in packaging or biomedical applications, or to engineer PRA monomer synthases. Sequences AAG55782-C558814, AAG58815-C55885 and AAB32485-B32542 represent mitomycon biosynthetic gene cluster DNA sequences and encoded proteins. Sequences AAG55812-C55814 AAG5880-C55886 and AAG58862-C55889 represent PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCAGGCGCATCCAGAAGGACCGGGCCACCGTCGGCCGGTGGGAGGACGGCAAGAACCGGC 151

The invention relates to an isolated and purified nucleic acid molecule comprising a sequence having mitomycin biosynthetic gene cluster, or its variant or fragment. Also included are an expression casester comprising the novel nucleic acid molecule (operably liked to a promoter functional in a host cell), a recombinant bacterial host cell in which at least a preter and uncleic acid molecule comprising mitomycin biosynthetic gene cluster is disrupted (resulting in a recombinant host cell) that produces altered levels of mitomycin relative to a corresponding nonrecombinant bacterial host cell), introducing exogenous DNA into a refractory streptomycin strain, identifying a nucleic acid molecule that is related to at least a portion of a nucleic acid molecule comprising a mitomycin cell and a product produced by the recombinant host cell. The nucleic acid encodes a Mitt, M

This invention relates to isolated and purified nucleic acid molecules from the mitomycin biosynthetic gene cluster. Mitomycins are a group of natural products that contain a variety of functional groups, including amino benzoquinone and axidine ring systems. The S. lavendulae can incomycin biosynthetic gene cluster comprises 47 mitomycin genes spanning 55kb of DNA. The invention includes an expression cassette comprising a mitomycin biosynthetic gene poerably linked to a promoter, and host cells of transformed with the cassette. The nucleotide, and protein sequences and the transformed with the cassette. The nucleotide, and antibiotic antiinflammatory, cytostatic, immunomodulatory, and antibiotic antiinflammatory diversatic, immunomodulatory, e.g. antibiotic activities. The nucleotide sequences are used to elucidate the molecular basis for the biosynthesis of the mitosane ring system, as well as to engineer the biosynthesis of novel natural products, e.g. antibiotics, anti-inflammatory agents income agents, immune-enhancers, immunosuppressants, agents to treat asthma. chronic obstructive pulmonary disease as well as other disease involving respiratory inflammation, or cholesterol-lowering agents or as crop protection agents (e.g. fungicides or insecticides) as well as bipolymers, e.g., in packaging or biomedical applications, or to engineer PRA monomer synthases. Sequences AACSSRSC-CSSRSQ and AACSSRSC-CSSRSG prepresent mitomycin biosynthetic genes Custer DNA sequences and encoded proteins. Sequences AACSSRSC-CSSRSG and AACSSRSC-CSSRSG prepresent por protein genes cluster DNA sequences and encoded proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        43575
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     43636 TOGTACGCATCCTCCGCCGGATCGCCACGCCATGAAGCCGGACTCCCGGCTCCTGGTCA 43695

The invention relates to an isolated and purified nucleic acid molecule comprising a sequence having mitomycin biosynthetic gene cluster, or its variant or fragment. Also included are an expression cassette comprising the novel nucleic acid molecule (operably linked to a promoter functional in a host cell), a recombinant bacterial host cell in which at least a portion of a nucleic acid molecule comprising mitomycin biosynthetic gene cluster is disrupted (resulting in a recombinant host cell that produces altered levels of mitomycin relative to a corresponding nonrecombinant bacterial host cell), introducing exagenous DNA into a refractory streptomycin strain, identifying a nucleic acid molecule that is related to at least a portion of a nucleic acid molecule comprising a mitomycin of a nucleic acid molecule comprising a mitomycin cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the factor of acid is useful for enhancing production of mitomycin antibiotics, which induce apoptosis and hence are useful as anti-tumour (via tumour hypoxia) agents and are useful in treating cancer. The agene cluster was isolated from Streptomyces lavendulae. The present sequence is an operon or gene cluster encoding the mitomycin biosynthetic proteins of the invention.
